

Quarto Basics

For a demonstration of a voltage divider circuit, see Figure 1.

```
import schemdraw
schemdraw.use('matplotlib')
import schemdraw.elements as elm
with schemdraw.Drawing() as d:
    d += elm.SourceV().up().label('10V')
    d += elm.Resistor().right().label('1kΩ')
    d += elm.Resistor().down().label('2kΩ')
    d += elm.Line().left()
```

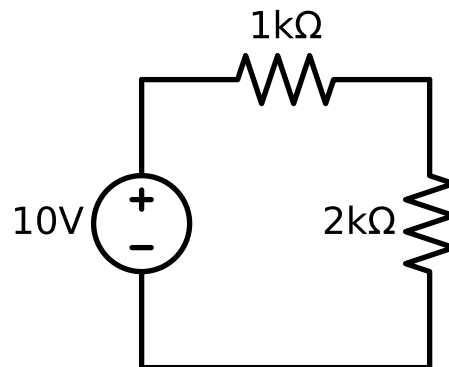

Figure 1: Voltage divider circuit

yes

```
import pandas as pd
pd.DataFrame({"Fruit": ["apple", "banana"], "Price": [1.20, 0.50]})
```

Table 1: Fruit prices

	Fruit	Price
0	apple	1.2
1	banana	0.5
